

## BRINGING ID CARD SECURITY TO YOUR BUSINESS!

**SECURITY, AUTOMATED PROCESSES** cardPresso XL edition is the best choice for companies focused on security and efficiency with top of the line features like multi-layout support, UV printing, user permission management and encoding.

### LIVE BIDIRECTIONAL CONNECTION TO DB USING ODBC DRIVERS

Ensuring that the data printed on your badges is updated can be a real headache. XL edition gets rid of headaches with a live bidirectional connection to your centralized database using ODBC drivers.

This means you'll always have updated data at your fingertips to edit or print badges and this information will be automatically saved to your centralized database - that means no data duplication, no data loss and no delayed updates.

### UV PRINTING

UV printed items are invisible to the naked eye, but appear when exposed to a UV light source, making it much more difficult to produce counterfeit ID cards.

XL edition allows you to UV print static elements like logos and trademarks or dynamic elements like name, photo, and the ID number of the card holder, adding an extra layer of card security.

### MULTI-LAYOUTS

XL edition isn't only about security - it's also about efficiency. That's why we've included the multi-layout feature, which allows you to print a batch of cards with differing layouts based on a database condition.

Let's imagine - you're printing ID badges for a group of new employees from varying departments and every department has a different badge layout for easy visual identification - great for security, but not so great for efficiency. Not any more - based on the employee information in your database, XL edition's multi-layout feature prints badges for each employee in the correct layout with a single click.

### CONTACTLESS AND CONTACT ENCODING

Facility security concerns are on the increase, which means more and more companies are moving to contact or contactless encoding to verify card holder identity and access permissions.

cardPresso's XL edition supports the encoding of a wide range of contact and RFID technologies such as MIFARE Classic, DESFire, Ultralight, NFC, SLE cards and more.

### USER PERMISSIONS

Security conscious businesses know it's essential to monitor who has access to your information flow. XL edition's "User Permissions" and "Audit Report" features allow you to keep track of the operations performed in cardPresso software to make sure your information flow stays secure.

### AUTO-PRINT

In some environments, ID Card printing needs to be integrated with third-party systems like ERPs that is why XL edition gives you the ability to configure cardPresso to print a specific layout under specific database conditions.

This means that you can have your card printed with no additional actions, automating the ID Card printing process.

## DO YOU NEED ADDITIONAL FEATURES?

	XXS	XS	XM	XL	XXL
DB CONNECTION	Internal Database Unlimited # of Records	Excel, .CSV, .txt	MS Access & SQLite	Database import & Live connection Open DB Connectivity (ODBC)	
CARD ISSUANCE	Pictures + Signature	Production View	Automatic Face Crop	Multi-Layouts, Fingerprint (*)	
PRINT				Auto-Print (*) + UV	Web-Print Server (*)
ENCODING	Magnetic + 1D Barcode	QR code	2D Barcode	Contactless + Smartcard (*) encoding	DESFire encoding (*)
SECURITY		Document Password Protection		User Allowances + Audit Report	
LICENSING		Single User + USB Key License			Multi-User, (**) Net License

(\*) Windows only (\*\*) Mac version only supports client installation
